Data Execution Protection

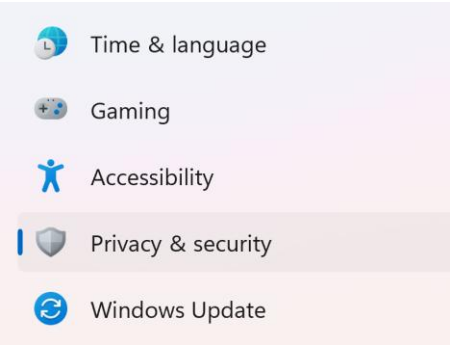

Date Execution Protection (DEP) is a feature of Windows 10 and 11. The GPL executables are identified as a threat by the Windows DEP feature and are prevented from running. To run GPL, a DEP exclusion needs to be declared for each GPL Executable.

To add a DEP Exclusion in Windows 11:

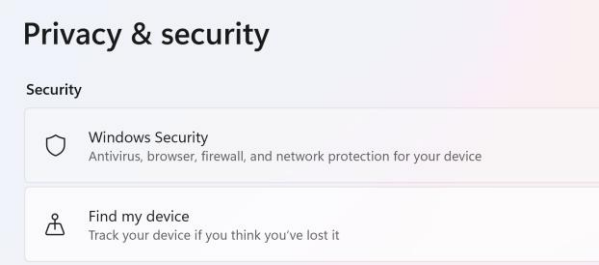

Open the Settings App:

Select Privacy & Security

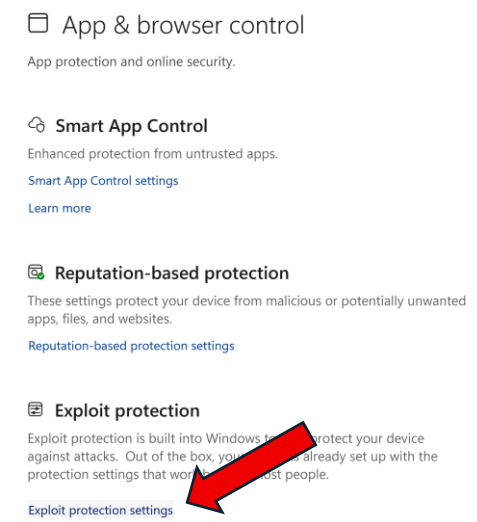

Select Windows Security:

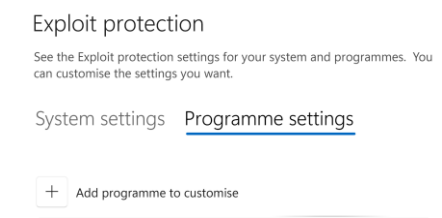

Select App& browser control

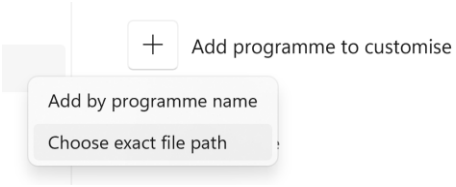

Select Exploit Protection Settings

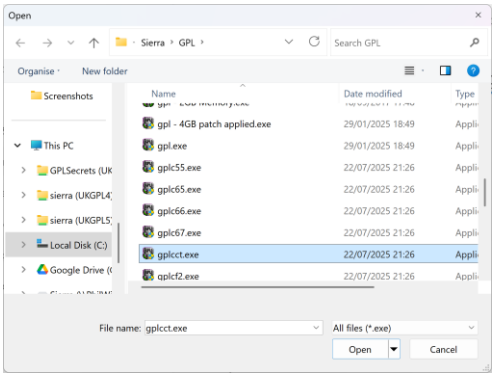

Select the Programme settings tab

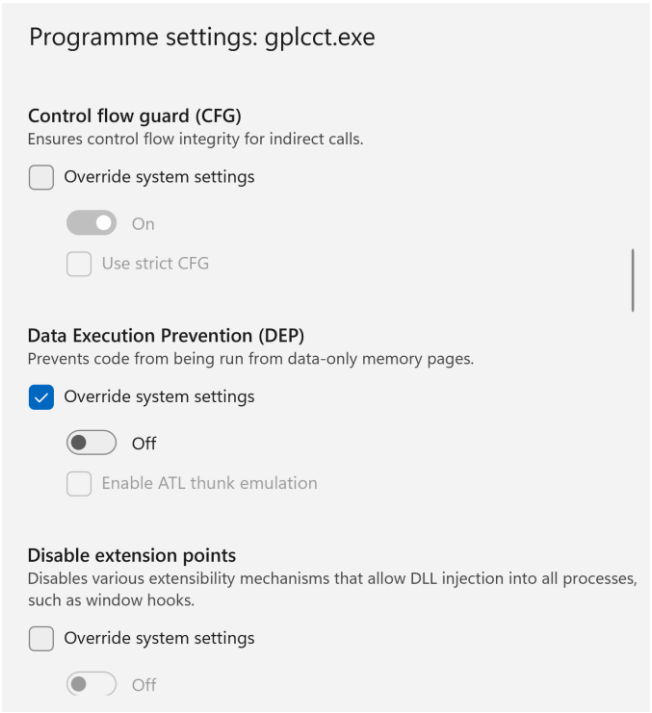

Select a GPL Executable via “Choose exact path”:

Scroll down to Data Execution Protect and turn it off:

Click Apply
